Professional Summary

Experienced Full Stack Java Developer with over 7 +years of expertise in designing and developing dynamic, scalable, and user-friendly web applications. Proficient in both frontend and backend technologies, with a strong focus on performance optimization, UI/UX, and Agile development practices.

- Proficient in **HTML5, CSS3, JavaScript, jQuery, React.js, Angular.js, and TypeScript**, used to build responsive, interactive user interfaces and integrate dynamic components with RESTful APIs in full-stack applications.
- Expertise in **designing and developing** responsive, dynamic, and cross-browser-compatible **UI/UX** for web applications using mobile-first design, media queries, and rigorous testing to ensure seamless user experiences across all devices and platforms.
- Applied strong understanding of accessibility standards and best practices to build inclusive web interfaces compliant with **WCAG** guidelines. Leveraged React hooks, state management, and component-based architecture while optimizing performance through lazy loading, code splitting, and asset minification.
- Developed scalable and high-performance backend services using **Java, Spring Boot, Spring MVC**, and Hibernate across enterprise-level applications. Built event-driven microservices with **Node.js and Express.js**, integrating **RabbitMQ and Kafka** for asynchronous processing and real-time data flow.
- Designed and developed **RESTful and GraphQL APIs** to power e-commerce and **CRM platforms**, enabling seamless data exchange between frontend and backend systems. Integrated and customized **WordPress, Joomla, and Salesforce** solutions to manage content, customer interactions, and business workflows.
- Delivered robust and scalable functionalities in projects to improve business efficiency and enhance customer satisfaction. Applied expertise in **JUnit, Mockito, Jasmine, and Selenium** to implement comprehensive testing and automation, ensuring high-quality and reliable software delivery.
- Applied strong background in **unit, integration, and UI testing** to ensure software quality and reliability throughout the development lifecycle. Utilized **Adobe Creative Suite, Figma, Adobe XD, and Sketch** to translate wireframes into fully functional, user-friendly **UI/UX designs** for web and mobile applications.
- Experienced in **Agile methodologies** such as Scrum, Sprint Planning, Daily Standups, and Retrospectives to ensure efficient project delivery and team collaboration. Utilized tools like **Git, JIRA, Confluence**, Visual Studio, **R Studio**, and IntelliJ IDEA to manage development workflows and track progress effectively.
- Provided technical mentorship to interns, promoted knowledge sharing, and specialized in enhancing code efficiency, SEO best practices, Google Analytics integration, and performance tuning to optimize application success.

SKILLS

Frontend: HTML5, CSS3, JavaScript, jQuery, React.js, Angular.js, TypeScript

Backend: Java, Spring Boot, Spring MVC, Hibernate, Microservices

Database: MySQL, PostgreSQL, MongoDB

APIs: RESTful, GraphQL

State Management: Redux Toolkit, Context API

Testing & Automation: JUnit, Mockito, Jasmine, Selenium WebDriver, TestNG

Version Control: Git, Bitbucket, GitHub

Cloud & Deployment: AWS, Google Cloud, Azure, Docker, Kubernetes

CMS & CRM: WordPress, Joomla, Drupal, Salesforce

Project Management & Agile: JIRA, Confluence, Bugzilla, Mantis, TestRail, HP ALM

Design & UI/UX: Figma, Adobe XD, Sketch, Adobe Creative Suite

DevOps & CI/CD: Jenkins, CI/CD pipelines, Server Monitoring

SEO & Analytics: Google Analytics, SEO best practices

EXPERIENCE

Client: Browngreer PLC (Virginia)

Mar2024- Present

Role: Full- Stack Developer

Project Description - Developed a comprehensive claims management system delivering a secure, scalable, and user-friendly platform for insurance claim processing. The system automated workflows, enabled real-time status tracking, and integrated third-party services, significantly reducing processing time and operational costs. As a result, the platform contributed to a 25% increase in claim processing efficiency and supported a 15% revenue growth by improving customer satisfaction and accelerating payment cycles.

Responsibilities:

- Designed a seamless claims management system using **React.js, Redux, and Tailwind CSS** for an intuitive user experience.
- Implemented state management using **Redux Toolkit** for efficient tracking of claim data and authentication.
- Built **RESTful APIs** with **Spring Boot, JPA/Hibernate, and PostgreSQL/MySQL** for secure data handling and scalability.
- Secured authentication and authorization using **Spring Security and JWT-based authentication**.
- Enabled role-based access control (**RBAC**) ensuring only authorized users can submit claims, and only admins can approve/reject them.
- Integrated file uploads with **AWS S3 or local server storage** for managing supporting documents.
- Built and consumed **RESTful APIs** using both **Spring Boot** and **Node.js (Express.js)** for scalable and secure service layers.
- Utilized **Microsoft SQL Server** for managing claim records efficiently in an enterprise setting.
- **Implemented** real-time claim status tracking using **WebSockets** or polling mechanisms for instant updates.
- Deployed the backend on **AWS EC2/Heroku** and the frontend on **Netlify/AWS S3** for a scalable architecture.
- Developed complex **SQL queries**, stored procedures, and triggers in **Microsoft SQL Server** to enhance database operations.
- Automated **CI/CD pipelines** using **GitHub Actions/Jenkins** for smooth deployments.
- Optimized the **UI/UX** using **Tailwind CSS** for a mobile-friendly and visually appealing design.
- Enabled **asynchronous processing and event-driven workflows** through **JMS (ActiveMQ/SQS)** and **AWS SNS/SQS**, ensuring scalable, decoupled inter-service communication.
- Integrated **third-party APIs** for **email/SMS notifications**, keeping users informed about claim status changes.

- Optimize performance using **lazy loading, memoization, and code splitting**.
- Develop **RESTful APIs** for handling policies, claims, payments, and user management.
- Design and manage a **scalable database schema** using **MongoDB/PostgreSQL**. Integrate **third-party APIs** (payment gateways, identity verification, and insurance databases).
- Develop and maintain business logic for premium calculations, claim processing, and **fraud detection**. Ensure **data integrity, security, and compliance** with industry standards.

Client: Marathon Petroleum Corporation (Findlay)

Mar.2023- Feb. 2024

Role: Full- Stack Developer

Project Description - Developed an end-to-end fuel supply chain management system that streamlined order processing, real-time delivery tracking, and data analytics, significantly improving operational visibility and customer engagement. The platform enhanced decision-making with dynamic dashboards and automated notifications, leading to reduced delivery delays and increased overall revenue through improved efficiency and customer satisfaction.

Responsibilities:

- Designed and developed a **full-stack web application** for managing fuel supply chain operations, including order management, live tracking, and analytics.
- Devised a responsive and accessible **UI/UX**, ensuring a seamless experience across desktop and mobile devices.
- Built the frontend using **Angular** with **RxJS for reactive state management** and **Tailwind CSS** for a modern, responsive UI/UX.
- Developed a secure backend using **AWS Lambda functions with API Gateway** to build scalable RESTful APIs, and implemented **Cognito for authentication** and **IAM-based role access control**.
- Implemented real-time tracking of fuel deliveries using **AWS WebSocket API** and **SNS push notifications**.
- Structured and optimized database schemas using **Amazon RDS PostgreSQL** with **AWS Data API** for efficient serverless data handling.
- Integrated **CI/CD pipelines using AWS CodePipeline and CodeBuild** for automated testing and deployment.
- Enhanced system security through encryption at rest and in transit **KMS, HTTPS, WAF-based API protection**, and robust input validation.
- Ensured accessibility by implementing **semantic HTML, ARIA labels, and keyboard navigability**, ensuring WCAG compliance for users with disabilities.
- Developed interactive, reactive forms for order management and customer feedback with form validation, error handling, and real-time updates using Observables.
- Created a dynamic, responsive dashboard for tracking fuel deliveries, order statuses, and analytics using **Angular** components and real-time data streaming via WebSocket API.
- Built custom reusable **UI components** like data tables, charts using ngx-charts, and forms, enhancing data visibility and user engagement.
- Boosted system performance through **API throttling, AWS ElastiCache Redis, Aurora RDS indexing**, and optimized Lambda performance, reducing latency by 30%.
- Led and mentored a team of junior developers in an **Agile/Scrum environment**, using **JIRA** for sprint planning, tracking, and peer code reviews.
- Implemented a robust notification system using **Amazon SES and SNS** for sending **email and SMS alerts** on order and delivery status.

Client: WEBSOC.AI (Hyderabad)

Sep.2020 - Dec.2022

Role: Software Developer

Responsibilities:

- Developed **responsive web applications** using **Angular** with TypeScript, **HTML5**, and **CSS3**, ensuring mobile responsiveness and cross-browser compatibility in enterprise-grade applications
- Built robust **backend services** using **Java**, **Spring Boot**, **Spring MVC**, and **Hibernate**, supporting complex business logic, RESTful API integrations, and secure data transactions
- Implemented **RESTful APIs** for seamless communication between Angular frontend and Java backend, ensuring scalability and maintainability
- Applied **server-side rendering Angular Universal** and **SEO best practices** to enhance search visibility, increasing organic traffic by 20%
- Used **RxJS** and Angular services for state management and reactive data handling, improving performance and responsiveness of UI components
- Designed and developed **modular, reusable components and services** in both frontend Angular and backend Java to accelerate development cycles and reduce code duplication
- Utilized **Spring Security with JWT** for authentication and authorization, implementing role-based access control and secure endpoints
- Managed application-wide data with **Spring Data JPA** and optimized performance through **custom queries** and **Hibernate caching techniques**
- Created **real-time dashboards** and visualizations using **NgCharts** and Angular, backed by efficient data aggregation logic in Spring Boot services
- Built and maintained **CI/CD pipelines** using GitHub Actions and Jenkins, deploying microservices to **AWS EC2/RDS**, with automated test and build workflows
- Conducted **unit and integration testing** using **JUnit**, **Mockito**, and **Jasmine**, ensuring robust coverage across full-stack features
- Designed and managed **PostgreSQL and MySQL schemas**, writing efficient queries and handling migrations to support new features and reporting requirements
- Employed **Spring Boot's Dependency Injection and modular structure** to support clean architecture, reusability, and easier testing
- Integrated **CMS tools like WordPress and Joomla** using REST APIs to enable dynamic content updates and seamless editorial workflows.
- Utilized **Google Analytics and Tag Manager** to monitor user behavior, enabling data-driven optimization of conversion funnels.
- Conducted **A/B testing and usability studies**, iterating on UI/UX designs based on user feedback and behavior insights.

Client: ECS Technologies (Vizag)

May 2018 - Aug 2020

Role: Junior UI/UX Developer

Responsibilities:

- Designed and implemented dynamic front-end interfaces using **HTML**, **CSS**, **JavaScript**, and **Angular.js**, ensuring an engaging and responsive user experience.
- Built and maintained **RESTful APIs** to facilitate communication between the front-end and back-end systems, ensuring scalability and seamless data flow.

- Integrated authentication and authorization features using technologies like **OAuth**, **JWT**, and custom role-based access controls to enhance security.
- Implemented database schemas and optimized queries in **Microsoft SQL Server** and **PostgreSQL** to manage complex data requirements and ensure efficient storage and retrieval.
- Developed and deployed full-stack applications, leveraging server-side technologies like **Node.js**, **Express**, and **PHP** for robust backend functionality, while utilizing **Angular.js** for dynamic front-end development.
- Automated testing processes using tools like **JUnit** for backend unit tests, **JMeter** for load and performance testing, and **Postman** for **API** testing to ensure high-quality, bug-free releases, optimal server performance, and reliable health monitoring.
- Deployed applications on cloud platforms like **AWS**, **Google Cloud**, or **Azure**, configuring **CI/CD pipelines** for continuous integration and deployment.
- Conducted usability and performance testing to ensure responsive designs and high-speed functionality across devices, ensuring optimal user experiences.
- Applied **Agile methodologies** and participated in sprints, standups, and code reviews to ensure timely delivery and foster collaborative team dynamics.
- Documented system architecture, **APIs**, and workflows to facilitate knowledge transfer, team collaboration, and maintainability.
- Developed and optimized **SQL queries** for efficient data retrieval, minimizing query execution time and improving overall application performance.

Client: ATOM Software solutions (Vizag)

Sept 2017 - Feb 2018

Role: Intern UI/UX Designer

Responsibilities:

- Created **wireframes and high-fidelity prototypes** using **Figma** and **Adobe XD**, aligning layouts with key journeys such as service search, provider profile viewing, and appointment booking.
- Built responsive, **mobile-first UI designs** using **Figma Auto Layout**, **CSS Grid/Flexbox frameworks**, and **Media Queries**, optimized for iOS and Android browsers.
- Developed **dual user dashboards** homeowner & provider with component-based layouts using Atomic Design methodology and tools like Storybook for UI consistency.
- Utilized **Design Thinking frameworks** using tools like **Miro** and **Notion** to map user pain points in home maintenance service booking, informing user-centric workflows and interface design.
- Designed intuitive navigation systems using **structured layouts**, **filterable grids**, and **CTA components**, styled via **Tailwind CSS** and **Material Design Principles**.
- Integrated real-time features such as live availability, location-based suggestions, and calendar views using **Google Maps API**, **FullCalendar.js**, and **GeoLocation API** mockups.
- Built a **UI design system** with consistent typography **Google Fonts**, **icon sets** and a **custom color palette** reflecting brand identity.
- Designed interactive review and rating modules with star-rating components, feedback forms, and conditional UX flows using **Figma** interactive components.
- Designed scalable components in **Figma libraries** for complex flows like recurring bookings, emergency services, and provider chat interfaces using real-time **UI simulations**.
- Created notification preference interfaces including SMS, email, and push notification UI patterns, ensuring user-configurable alerts.

- Integrated interactive elements like skeleton loaders, confirmation modals, tooltip hovers, and toast alerts, using design libraries like **Radix UI** and **Framer Motion**.
- Implemented page transitions and modal animations using **Framer Motion** guidelines and **Figma Smart Animate**, reducing cognitive load during navigation.
- Developed reusable and accessible **React components** using **TypeScript**, **Tailwind CSS**, and **React Hook Form**, ensuring consistent behavior and design alignment across the application.
- Integrated frontend with **RESTful APIs** using **Axios** and **React Query**, enabling real-time updates for service availability, booking status, and provider communication.
- Ensured accessibility compliance using **WCAG 2.1 standards**, **ARIA roles**, alt text labeling, color contrast testing with **Stark plugin**, and keyboard navigability simulations.
- **Ran A/B testing** on UI variants using mock data in **Optimizely** and **Google Optimize**, testing layout placement, CTA hierarchy, and listing formats for conversion optimization.
- Optimized design assets using **ImageOptim**, **SVGOMG**, and **lazy loading strategies** for image-heavy service pages, improving SEO and reducing bounce rate.

EDUCATION

University of the Cumberland (Williamsburg) Master's in Information Technologies
Andhra University (Vizag) Bachelor's in Computer Science and Engineering
